

### Application Developer

Design an EHR system and connect and configure it with AWS database.

### AWS connectivity with MySQL

---

- Create a DB instance on AWS and with the credentials and respective hostname connect it with the MySQL workbench.
- 

### Installing Dependencies

---

The following dependencies have to be downloaded:

Node.js and npm

With npm the following have

Create-react-app

Express

Mysql

### Starting the app

---

Npm start for frontend

Node server.js for backend. Both the files should run for the web application to work.
